PROJECTS

Food Donation & Tax Benefit Platform | Github Website

- Project: Developed a full-stack web application using React, Node.js, Express, MongoDB, and AWS S3. The application connects food donors with verified NGOs to reduce waste and facilitate tax exemption certificates.
- Donor & NGO Portals: Enabled donors to list food items, track deliveries, and access tax benefits. NGOs can register, verify documents, and claim food assignments.
- Admin Control: Created a centralized dashboard for user verification, logistics routing, and tracking overall platform impact statistics. Integrated real-time notification support using Socket.io and Firebase FCM.

ByteCode Blog Platform | Github Website

- Engineered a production-ready blog platform with authentication and real-time capabilities.
- Integrated Prisma ORM with a PostgreSQL database.
- Established secure user authentication and enhanced API performance.

E-Commerce Website | Github Website

- Developed a responsive e-commerce platform featuring authentication and a seamless cart system.
- Enhanced performance through lazy loading and optimized state management.
- Integrated the Razorpay payment gateway for secure transactions.

Website Grader | Github Website

- Developed an SEO and performance analysis tool leveraging the Lighthouse API
- Produced detailed website performance reports and delivered actionable optimization insights
